

Jeffrey Macy

APPLYING FOR

Staff Software Engineer, Claude Design · **Anthropic**

🎓 A.A.S. Web Design, Glendale Community College · B.S. Programming & Data Analytics (*in progress*) |

Web & Applications Developer, **Arizona State Legislature**

Claude Design is, as far as I can tell, front-of-the-frontend engineering with design literacy built in — someone who can go from a prompt or a codebase to a polished interface without losing craft along the way. That's the exact shape of work I already do.

I build and maintain the shared theme architecture behind both chambers of the Arizona Legislature — azhouse.gov and azsenate.gov — one design system, two production government sites, 15+ page templates, WCAG AA compliance with contrast ratios enforced at the token level. I also shipped something odd for a government site: a text-to-speech system that reads bill numbers aloud on the House floor using a cloned voice of the chamber's First Reader. It's in daily use. Nobody asked for it to be delightful; I built it that way anyway, because that's the instinct Claude Design needs — someone who treats a prototype tool as a product, not a utility.

On my own time I built Inventor Studio, an AI coding assistant on the Anthropic SDK with a structured-agent pipeline and MCP servers and clients I wrote from scratch — React, TypeScript, Tailwind, Monaco, Reactflow, tldraw. It's the same bet Claude Design is making, just at product scale, and I've been building smaller versions of that idea on my own for a while now, before there was a job posting for it.

HOW I MATCH THE ROLE

FRONT-OF-THE-FRONTEND CRAFT Motion, polish, and interaction detail on two production government sites, not a portfolio piece	PROTOTYPE → PRODUCTION Built MCP server and client from scratch using <code>@modelcontextprotocol/sdk</code>, then shipped an app on top of it
DESIGN SYSTEM THINKING One shared WordPress theme powering two chambers of a state legislature that inherit a system and diverge only where they must	BUILDS CLAUDE-NATIVE TOOLS Inventor Studio runs on <code>@anthropic-ai/sdk</code> directly — I know the API's behavior, not just the chat product
ONE-PERSON TECHNICAL SHOP Freelance since 2023, own scoping through delivery for every client — comfortable owning a thing end to end	SHIPS THINGS NOBODY ASKED FOR The floor text-to-speech system wasn't a requirement — I built it because it made the product better

FULL STACK

`@anthropic-ai/sdk``@modelcontextprotocol/sdk``React 18``TypeScript``Tailwind CSS``Radix UI``shadcn/ui``Framer Motion``Monaco Editor``Reactflow``tldraw``Electron``Vite``Node.js``Playwright`

I'm relocating for this role, so SF, NYC, or Seattle all work for me. Inventor Studio is private but I'll walk through the architecture or the agent pipeline design in an interview. The Legislature sites are live and public — `azhouse.gov` and `azsenate.gov` — so you don't have to take my word on the craft part.
