

APPLYING FOR — Full Stack Engineer, Education Labs · Anthropic

🎓 A.A.S. Web Design, Glendale Community College · B.S. Programming & Data Analytics (in progress) |

Web & Applications Developer, Arizona State Legislature

The shape of this role — one technical builder, high ambiguity, capability over engagement — is close to how I already work, just without a team or a title attached to it.

The clearest example: I built a text-to-speech system for the Arizona House floor that reads bill numbers aloud in a cloned voice of the chamber's First Reader. Nobody wrote a ticket for it. I noticed that live floor sessions move fast and that bill numbers spoken aloud help staff, press, and the public track what's happening in real time — a genuine capability gap, not an engagement problem — and I built the thing end to end: voice cloning, the playback pipeline, integration into the floor system. It's been in daily legislative use since I shipped it.

That's the same posture I bring to everything I build solo — a mobile game shipped to the App Store by myself while finishing my associate's degree, an AI coding assistant (Inventor Studio) with MCP servers I designed from scratch, and a freelance practice where I own scoping through delivery for every client. I'm comfortable being the only technical person on something, deciding what "good" looks like without a spec to point to, and shipping it anyway.

HOW I MATCH THE ROLE

FRONT-END CRAFT, TS/REACT React, TypeScript, Tailwind in daily use across two production government sites and every freelance client build	BACK-END + DATA Modeled structured content — bills, legislators, votes — from SQL Server into reusable views; Python for the TTS pipeline
SHIPS CAPABILITY, NOT ENGAGEMENT The floor TTS system solved a real access problem nobody asked me to solve	ONE-PERSON TECHNICAL SHOP Freelance since 2023 — scoping, build, and delivery alone, for every client
INTERACTION DESIGN INSTINCTS Shipped a solo mobile game and 15+ custom page templates without a design team behind me	COMFORT WITH AMBIGUITY Every freelance engagement starts with no spec — that's the default condition of the work

@anthropic-ai/sdk

React 18

TypeScript

Tailwind CSS

Python

SQL Server

Node.js

Framer Motion

Voice cloning / TTS

Supabase

Stripe

Vite

Playwright

I'm relocating for this role — SF or NYC both work. If it's useful, I can walk through the TTS system's architecture directly — it's a small project, but it's the clearest proof I have of building for capability instead of time-on-site, which sounds like the actual job here.
