

Jeffrey Macy

APPLYING FOR

React/Redux Frontend Developer · GovCIO

🎓 A.A.S. Web Design, Glendale Community College · B.S. Programming & Data Analytics (*in progress*) |

Web & Applications Developer, **Arizona State Legislature**

I build production software for a state government right now, so "cross-functional team dedicated to delivering impactful features on VA.gov" is a description I recognize rather than one I have to imagine. The official Arizona House and Senate websites run on a shared theme architecture I built and maintain, serving live legislative data to the public with WCAG AA accessibility enforced at the design-token level, not audited in after the fact. That's the same bar VA.gov holds itself to, for the same reason -- the people using it don't get to pick a different tool.

Day to day that means React, TypeScript, and Tailwind against a back end pulling structured content out of a SQL Server database into reusable views shared across three separate government sites. I write scenario-based regression tests so edge cases get caught before non-technical staff ever see them, and I work directly with legislative staff to turn their workflow needs into real template and system changes -- the same loop of translating institutional requirements into shipped UI that this role describes.

What I bring is a government platform I already ship on, real users who depend on it working correctly, and a compliance bar I take seriously because the alternative is a legislator's staff calling to ask why a page broke. I'm applying because VA.gov serves veterans the same way azhouse.gov serves Arizona residents -- as infrastructure, not a product -- and that's the kind of frontend work I want to keep doing.

HOW I MATCH THE ROLE

REACT / REDUX IN PRODUCTION React, TypeScript, Tailwind daily across two production government sites	DESIGN-SYSTEM LIBRARY WORK Built the custom-fields and template architecture — 15+ templates per site
REST API INTEGRATION Structured content pipeline from SQL Server into reusable views	TESTING STANDARDS Scenario-based regression testing across every page template before release
GOVERNMENT COMPLIANCE BAR WCAG AA enforced at the token level, not audited after launch	STAKEHOLDER TRANSLATION Work directly with legislative staff to turn workflow needs into shipped features

FULL STACK

React 18

Redux

TypeScript

JavaScript

Tailwind CSS

REST APIs

SQL Server

C#

Node.js

Git / GitHub

Agile / Scrum

Playwright

I'm remote in Arizona and available within CONUS as required. Willing to go through the Public Trust process -- I already work in a public-sector role that expects the same level of scrutiny. [azhouse.gov](#) and [azsenate.gov](#) are both live if you'd like to see the work directly before we talk.
