

Jeffrey Macy

Software Developer — Full-Stack, QA & Debugging

macy.jeffreyj@gmail.com

602-619-4553

Laveen, Arizona

jeffreymacy.com · github.com/Heavens-Lava

I build and maintain production web applications — right now that means the public-facing sites for the Arizona State Legislature, plus internal C# tools and some AI-assisted dev tooling on the side. I like the debugging side of the job in particular: tracing a weird symptom back through the stack until it actually makes sense.

PROFESSIONAL HIGHLIGHTS

- Ship software that's built to last, not just to demo — from first design through years of maintenance after.
- Good at chasing down bugs that hide across the stack, wherever the real cause turns out to be.
- Comfortable modernizing old systems without breaking what's already working in production.
- Care about the boring stuff that keeps sites from breaking: testing, accessibility, code that's still readable in six months.
- Use AI tools to move faster day-to-day, but still read every line before it ships.
- Comfortable explaining technical tradeoffs to people who don't write code for a living.

EXPERIENCE

Web & Applications Developer

Oct 2025 — Present

Arizona State Legislature

Phoenix, AZ — Hybrid (onsite & remote)

- Support three production legislative websites (azhouse.gov, azsenate.gov, azleg.gov) — House and Senate sharing a nested theme, azleg.gov built and maintained separately — used daily by Arizona legislators and staff.
- Maintain structured data spanning bills, legislators, committees, votes, and calendars, piped from the Legislature's SQL Server database into reusable views shared across all three sites.
- Debug production issues by tracing the problem from what a user sees back to the underlying data, template, or query.
- Built out scenario-based regression testing across 15+ page templates, so edge cases get caught before non-technical legislative staff ever see them.
- Keep all three sites at WCAG AA accessibility compliance, and work directly with legislative staff to turn their workflow needs into real template and system changes.
- Also help maintain and build out the Legislature's broader suite of 100+ internal applications, including C# document-processing tools.
- Use AI-assisted workflows to move faster on implementation, testing, and debugging — but still own the code review and production quality at the end of it.

ADDITIONAL EXPERIENCE

Family Support Specialist — Touchstone Behavioral Health Services

Oct 2023 — Jan 2025

Family coaching to rebuild communication and rapport between parents and children.

Independent Game Developer

2022 — 2023

Designed, built, and shipped a game to the App Store while completing my Associate's degree.

Mail Carrier — United States Postal Service

2017 — 2022

Route management and daily delivery to 400–500 addresses; five years of consistent, independent field work.

INDEPENDENT PROJECTS

Fiscal Data Toolkit

github.com/Heavens-Lava/fiscal-data-toolkit →

A large collection of zero-dependency Node.js scripts and a web dashboard pulling live U.S. fiscal, banking, and company-financials data from government and financial REST APIs (Treasury, FDIC, FRED, SEC EDGAR, USASpending.gov), plus labor-market data — real-time job listings from company ATS platforms (Greenhouse, Lever) and BLS employment statistics — built independently to explore federal spending, banking, markets, and the job market itself.

OpenFinance

github.com/Heavens-Lava/openfinance →

Live: jeffreymacy.com/openfinance →

My first publicly shared community app — a free, local-first personal finance dashboard anyone can download and run. Drop in bank CSV exports for spending breakdowns, cash-flow visualization, and net-worth tracking, entirely client-side with no server contact or account linking.
